

# Pokémon GO

## ## Summary of Pokémon GO

There is no doubt that Pokémon GO popped up as one of the most popular mobile apps ever released in July of 2016. This game is designed to reward players when they explore new locations in reality. Pokémon GO allows users to find hidden Pokémon while they are out and about in the real world. You can even team up with other players and start your very own joint adventure with them.

The level of entertainment that can be achieved while playing Pokémon GO is truly remarkable, and it also promotes exercise because a main portion of the app requires players to get out and explore the world. You will be able to progress through the app and create your very own custom dream Pokémon GO team.

New in-app events are constantly being started by the developers to promote community activities and other fun events. Pokémon fans will love their chance to get in on the action and start collecting their own Pokémon within the app.

## ## Gameplay

One of the main reasons that Pokémon GO is so popular is because it is so simple to start collecting Pokémon. There are more than 500 collectibles for you to find and you could potentially speed up the process by joining up with other trainers for your upcoming adventure.

The two primary game mechanics require players to walk around the real world to catch Pokémon. You can also obtain legendary Pokémon by raiding friends and earning in-game rewards that create an exciting experience. ## Conclusion

If you haven't tried out Pokémon GO since it launched in 2016, then you might as well give it a shot along with the hundreds of millions of other players that have enjoyed collecting Pokémon on Pokémon GO since it initially released. You will have the opportunity to embark on new adventures and spend hours of your time capturing hundreds of different types of Pokémon.

The overall compatibility for Pokémon GO is mixed, but typically, you should be able to play Pokémon GO as long as you have 2 GB of RAM and sufficient GPS-Tracking capabilities. You will also need to have a sufficient high-speed WiFi connection for the best overall Pokémon GO experience.

## Advantages / Disadvantages
